Carbon Accounting and Reporting

Lecture 4 – Assignment Briefing

Dr James Robey / Jon Hampson
3rd October 2025

Assignment Briefing

Your Assignment

You are part of a team of consultants working for a carbon management advisory firm (e.g. EcoAct, Carbon Clear, Carbon Credentials, South Pole Group, CO2logic). Your client has brought you in to review their carbon reporting and decarbonisation strategy.

Using publicly available information from company websites, public disclosures (annual report, sustainability reports, etc) and CDP submissions (link provided in Assignment Briefing):

- Explain your chosen company's decarbonisation strategy, carbon targets and also include details of the company's carbon credit strategy (if they have one). You should include a very short explanation of the company for context in this section. [2 pages]
- Provide a comprehensive analysis your company's carbon accounts – critique and present strengths, weaknesses, missing scopes. Provide a critical assessment of company's decarbonisation progress over last 3-5 years reflecting on the initiatives that they have undertaken (i.e. 2019/21to 2024) [4-5 pages]
- Benchmark your company's carbon emissions and their 3-5 year decarbonisation performance against 3 or 4 relevant competitors [3-4 pages] [Max & Taylor](#)
- Finish with a conclusion highlighting what you learnt from analysing the competitors which could be helpful for your chosen company's carbon measurement and decarbonisation strategy [1-2 pages]

The above content should be presented across 12 PowerPoint slides. In addition, please provide a one-page executive summary at the start of the report (this is in addition to the 12 pages).

Your Assignment: Part 1 - the Report

Structure and guidelines for the final deliverables:

- Your audience for the report is the executive management team of your client organisation (this is a C-suite audience with limited time).
- Try to be as concise as possible and use visuals to illustrate your points.
- The main section of your report should be no more than 12 slides (plus a one-page executive summary) covering your analyses and conclusions. The title page, executive summary and any appendices (e.g. details of assumptions) do not need to be included within 12 slides, but include no more than 6 pages of appendices.
- If you used AI in any way in the preparation of your project, you must include one or two slides in a separate appendix clearly explaining how you used AI in this assignment (more details follow). This is in addition to the six regular pages of appendices.
- Draw the charts yourself and make original analyses (copy paste from other studies can be included in appendix, but not in the 12 slides that you present to your client).
- Use publicly available data sources for your calculations (and mention the source) plus CDP data provided.
- Do not forget to put the references on each slide and include a bibliography in the appendix.
- For your analysis, detail your key assumptions.

The deadline to submit your report to the hub is: **16.00 on Monday 24th November 2025**

Please use naming format: **Group_[Cohort][Group]_Company Name_Report.pdf**
Group_[Cohort][Group]_Company Name_Report.xlsx (if needed)

E.g. Group_1D_Starbucks_Report.pdf

Please also email a copy to: j.robey@imperial.ac.uk and j.hampson@ic.ac.uk

Your Assignment: Part 2 – the Presentation

Prepare a summary presentation deck that you can present in 20 minutes.

- You should prepare to present as the audience have not received the report ahead of the presentation
- There will be up to 10 mins of Q&A following your presentation
- Keep the slide deck clear, visual and concise – no more than 5 content slides – appendices can be used and referred to during the Q&A
- All team members should be actively involved

The deadline to submit your presentation is: **16.00 on Tuesday 25th November 2024**

Please use naming format: **Group_[Cohort][Group]_Company Name_Slides.pptx**

E.g. Group_1D_Starbucks_Slides.pptx

Presentations will be on 27th and 28th November

Please email a copy to: j.robey@imperial.ac.uk and j.hampson@ic.ac.uk

Use of AI

- **If you used AI in any way in the preparation of your project**, you must include **one or two slides in a separate appendix** clearly explaining how you used AI in this assignment, and specifically the steps you undertook to ensure the AI assimilated information is accurate and correct.
- **You must also include a statement on its own page**, immediately after the title page (for both the report and presentation), to acknowledge your use of AI tools within the project. This statement should be written in complete sentences and include the following information:
 - Name(s) and version(s) of the GenAI tool used (e.g. ChatGPT-3.5)
 - Publisher (the company that provides the GenAI system; e.g. OpenAI)
 - URL of the AI tool (if applicable)
 - Brief description (single sentence) of the way in which the GenAI tool was used
 - Confirmation that the work is your own
- For example: "We acknowledge the use of ChatGPT-3.5 (OpenAI, <https://chat.openai.com>Links to an external site) to generate an outline for background study. We confirm that no output generated by GenAI has been presented as our own work."
- Note: **if you have not used AI tools to help with your project**, you must still include a statement to acknowledge this fact. For example: "We declare that no AI tools have been used to produce this work."

Your Client

Your client is ...

You may choose your own client, but it must:

- be a publicly listed company (e.g. PLC, SE, SAS, SARL, NV, AG, etc)
- not be in financial services
- have an SBTi validated net zero target (as at 3rd Oct 2025)
 - *See xls on the hub*
- must disclose publicly to CDP and ideally have at least an A or A-score in their 2024 climate submission
- not being done by another group (first come, first served)

sciencebasedtargets.org/target-dashboard#dashboard

Relaunch

We have updated our website. Information about target submission and validation, including commitments, can now be found on the new SBTi Services website. [Find out more about the changes](#)

Q

DISCLAIMER: A validated science-based target represents an entity-specific greenhouse gas (GHG) emissions reduction target that has been validated against SBTi's public standards and assessment metrics. The SBTi does not offer any assurance that a given entity will achieve, or is on track to achieve, its validated science-based target, nor does the validation of a target implicitly endorse or recognize the means chosen by an entity to achieve said target. A validated science-based target covers only GHG reduction targets and should not be used to claim an entity is making other climate or sustainability related impacts beyond the future GHG reduction target.

CDP Corporate Data

CDP Worldwide >

Online dataset

The Carbon Disclosure Project (CDP) climate change corporate response dataset contains comprehensive quantitative and qualitative data from companies publicly disclosing their environmental information to CDP. It includes over 100 questions covering topics such as climate risks, low-carbon opportunities, emissions management, and governance and strategy around climate change. The dataset also includes sector-specific modules, full alignment with the Task Force on Climate-related Financial Disclosures (TCFD) and improved alignment with other reporting frameworks, and an emphasis on forward-looking metrics. Further information on the CDP data (including, e.g., questionnaires, scoring methodology, and FAQs) can be found at <https://www.cdp.net/en/guidance>.

Selecting your company

- I will create an announcement in the newsfeed **next week**
- Please indicate your choice by adding a comment including:
 - **Group number**
 - **Selected company (including their web home page)**
 - **Their 2024 CDP rating and their net zero target year (from SBTi)**
- Please check the company hasn't already been chosen
- Please confirm your choice by email to j.robey@imperial.ac.uk and j.hampson@ic.ac.uk

Some example projects will go onto the hub (not immediately):

★ PRET A MANGER ★

Pret's position in the food services sector

To develop a roadmap of sustainability initiatives, it is critical to assess Pret's sustainability strategy and that of its close competitors

Pret's Sustainability Strategy

- Pret has established a five-pillar sustainability strategy to design and implement sustainability initiatives
- However, the current strategy faces various challenges including a lack of specificity, goals, and transparency

- No global consistency
- No environmental reduction targets
- No quantitative evidence
- No public environmental report

Analysis of Sustainability Initiatives across Industry Competitors

- Evaluating Pret's competitors across eight (8) sustainability focus areas highlights: (1) opportunities for Pret to differentiate itself from the competition, and (2) areas for Pret to catch-up to the competition

Source: Analysis of Starbucks, Greggs, Panera, and Tim Hortons Sustainability Strategies

Corporate Sustainability Strategies – Pret a Manger

Imperial College Business School

★ PRET A MANGER ★

Executive Summary

Current situation

Despite clear trials to become more sustainable, Pret's sustainability strategy lacks transparency, consistency across the various markets it operates in and ambitious targets for the future. Moreover, Pret neither responds to the CDP nor does it disclose its environmental report. Going forward, Pret would need to align itself more closely with some of its competitors within the same industry as well as with the sustainable image it projects to truly have a positive impact on the environment.

Our Approach

- Estimated Pret's CO₂ emissions footprint across 444 stores, amounted to a total of 38,000 Tons of CO₂ with stores accounting for 87% of CO₂ emissions
- Integrated Pret's internal analysis with competitive landscape analysis to determine 5 Areas of Focus (AoF) for carbon reduction initiatives
- Generated a 3 step framework consisting of the strategic alignment, economic viability and CO₂ impact of initiatives within each AoF
- Balanced short term gains with long term vision, assessed suggested initiatives and filtered the most economically and environmentally effective based on the framework
- Selected 11 initiatives in total, all are economically viable with the top five initiatives alone achieving 8.94 t CO₂e savings per store per year (10% reduction)

Recommendations

Integrate climate change mitigation into the corporate governance of the business.

The 5AoFs represent operations that

- contribute most to Pret's carbon footprint
- opportunities to differentiate itself from competitors
- to keep up with competition

Focus on achieving a combination of highly economically viable options with less economically viable options yet highly impactful initiatives

Corporate Sustainability Strategies – Pret a Manger

Imperial College Business School

★ PRET A MANGER ★

Identifying sustainability initiatives

A large fraction of CO₂ emissions arise from in-store activities – focusing on these in-store activities can deliver significant CO₂ savings impacts

Estimating Pret's CO₂ Footprint

- A three-step approach was used to estimate Pret's CO₂ emissions footprint:

Competitor	Metric Tons CO ₂	Stores	CO ₂ / Stores
Starbucks	2,240,000	23,000	97
Greggs	125,000	1,750	71
Tim Hortons	380,000	4,300	89
Average			87

Source: Analysis of Starbucks, Greggs, and Tim Hortons 2015 emissions

Pret a Manger = 444 x 87 = 38,000 Tons CO₂

- Common practice among competitors is to exclude Scope 3 CO₂ emissions associated with purchased food products (e.g., meat, dairy, etc.)
- Best practice, in line with the Greenhouse Gas Protocol, requires all Scope 3 emissions to be reported, particularly since food products make up a significant fraction of total emissions

Stores account for 87% of CO₂ emissions

- In-store sustainability initiatives can have a significant impact on overall CO₂ emissions
- Corporate activities account for only 13% of CO₂ emissions

Source: Analysis of Tim Hortons and Panera Bread Emissions Reports
